

SUGAR RAYMOND

Full Stack Software Developer

2026778451

sugar.raymond110@outlook.com

PROFILE

Software Engineer with a rich background in Agile methodology, I am actively seeking an engaging development role. I have a deep proficiency in a variety of technologies such as Angular, ReactJS, Java Springboot, NodeJS, Django, JavaScript, AWS, Typescript, SQL, NoSQL, Rest APIs and GraphQL. My expertise extends to object-oriented programming and design, with a focus on model-view-controller architecture. I am adept at setting up system configuration guidelines and have strong management skills in technical environments. My experience covers a wide range of equipment platforms, system services, network security, debugging, and customer training, making me well- equipped for diverse and challenging projects.

EMPLOYMENT HISTORY

❖ Sr Software Developer, CapitalOne Oct 2024 — Present

- Write clean, efficient, and maintainable code using Python, Java Springboot.
- Collaborate with the development team to debug, develop, and test software.
- Implement tokenization to ensure data protection.
- Worked with Git, Jira, Confluence, AWS, Linux/Unix, Python, and other technologies to develop software solutions
- Participate in daily stand-up meetings to provide updates on work, identify blockers, and stay informed of the priorities for upcoming work.
- Experience with automated unit testing, end-to-end testing, and smoke tests striving for 100% automated test coverage.
- Experience with log management application Splunk and used CI/CD system

❖ Senior Software Engineer, Zotech Aug 2023 — Sept 2024

- Write clean, efficient, and maintainable code using, HTML, CSS, JavaScript, Python, C#, Java Springboot.
- Knowledge of REST API and GraphQL development and documentation.
- Develop and optimize web app interfaces using React, Angular, NextJs
- Skilled in implementing robust security measures, designing scalable architecture and debugging.
- Leveraged Tensor flow and Pytorch for building and training recommendation models.
- Experience with SQL and NOSQL databases like Mongo DB, Dynamo DB and postgres.
- Collaborate with the development team to design, develop, and test software
- Experience with the following: Java, Angular, JavaScript, Spring, XML, python, JSON, Apache Kafka.
- Participate in daily stand-up meetings to provide updates on work, identify blockers, and stay informed of the priorities for upcoming work.
- Experience with automated unit testing, end-to-end testing, and smoke tests striving for 100% automated test coverage.
- Leverage tools like Figma, Adobe xd and sketch for UI/UX design.
- Experience with AWS infrastructure components such as AWS Lambda, EC2, ECS, ECR, RDS, DynamoDB, CloudFormation, SNS, API Gateway, etc.
- Bias towards build & pipeline automation, and containerization with tools such as Docker, Kubernetes, Jenkins, Maven.

❖ **DevOps Instructor, California Institute for Career Development** Jan 2023 — Aug 2023

- Demonstrate expertise in Git, Docker, Bash scripting, Ansible, Terraform, CloudFormation, Jenkins, Kubernetes, and Maven, showcasing real-world use cases and best practices.
- Guide students through the intricacies of essential AWS services, including EC2, AMI, AWS Organization, Key Pairs, Security Groups, VPC, S3 bucket, and CloudTrail.
- Experience in Infrastructure provisioning, monitoring, and maintenance.
- Led students through the process of constructing a sophisticated VProfile project, encompassing essential technologies such as Tomcat, Nginx, Memcached, RabbitMQ, and MySQL, all orchestrated within Docker containers.

❖ **Software Developer, Agile Technologies** Feb 2020 — Jul 2022

- Use package management tools such as NuGet and NPM.
- Develop solutions with Microsoft tools and frameworks (.Net, C#, Visual Studio, Azure DevOps, GitHub, etc) while design in Adobe XD and Figma for UX/UI.
- Develop Javascript/Typescript single-page web applications and shared enterprise components using the React framework.
- Developer web application using Angular, with custom Angular Material UI
- Develop and implement secure, distributed RESTful services in an Event-Driven Architecture using Microsoft .Net Framework and Azure
- Develop, maintain, and supervise solutions and platforms built on Microsoft Operating Systems (Windows Server, SQL Server, IIS, etc)
- Worked with NodeJS, Git, Jira, Confluence, AWS, Linux/Unix, Python, Elastic Search, Kubernetes, and other technologies to develop software solutions.

EDUCATION

❖ **University of Cincinnati** Aug 2022 — Dec 2023

Master in Information Technology

Cincinnati
